

Why do Spiders Spin Webs?

Our minibeasts topic provides opportunities for us to learn about how to care for other creatures and for our environment. While looking for minibeasts in our own school garden area we will discuss where they might live, and why. Whether they need to hide from predators, whether they need to live near water and what they might eat. There will be plenty of opportunities for counting, sequencing activities and writing about our findings too! Most of the children already know lots of names of different minibeasts here is an example of some of the vocabulary we will be using at school. Please reinforce these at home this half term. Many thanks! The Reception Team
